

Dynamic for small and medium enterprises

x10sure – Activate the full potential of your IT

x10sure

Having x10sure in place provides the perfect IT design for future growth, application integration and operation. x10sure offers an advanced and pragmatic entry point into the dynamic data center IT environment for small and medium enterprises.

x10sure provides an easy, cost effective high availability IT solution, protecting both real and virtual servers in an affordable n:1 concept. The x10sure solution consolidates stand alone servers, storage and applications into a more powerful, scalable infrastructure. Legacy Applications can now run faster on new hardware and coexist in the same infrastructure with modern business applications such as Microsoft Dynamics, SAP Business Suite and SharePoint.

Pragmatic approach for dynamic businesses

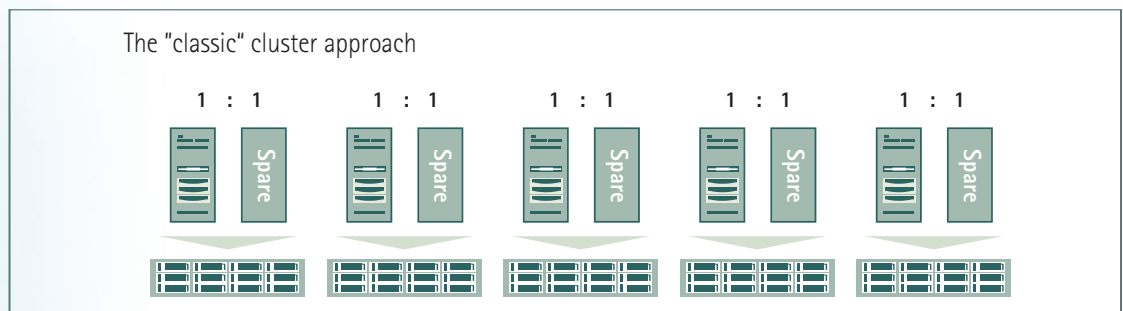

x10sure converts a distributed infrastructure into a consolidated, remote boot infrastructure. This results in fewer servers and centralized storage that can be shared between applications and utilized more efficiently. Adding VMware virtualization further increases utilization and eliminates operating system dependency on hardware. The x10sure solution also enables end-to-end redundancy for servers, storage and storage fabric. x10sure monitors the infrastructure and automatically recovers any failed server or storage path.

With x10sure, decoupling applications and the operating system from dedicated hardware enables organizations to migrate and run their existing Windows applications on any of the real or virtual servers in the same shared infrastructure. x10sure provides SMEs with previously unattainable levels of high availability and simplicity. With x10sure, Fujitsu Siemens Computers takes a lower-cost approach to high-availability by protecting an array of servers with a single failover machine.

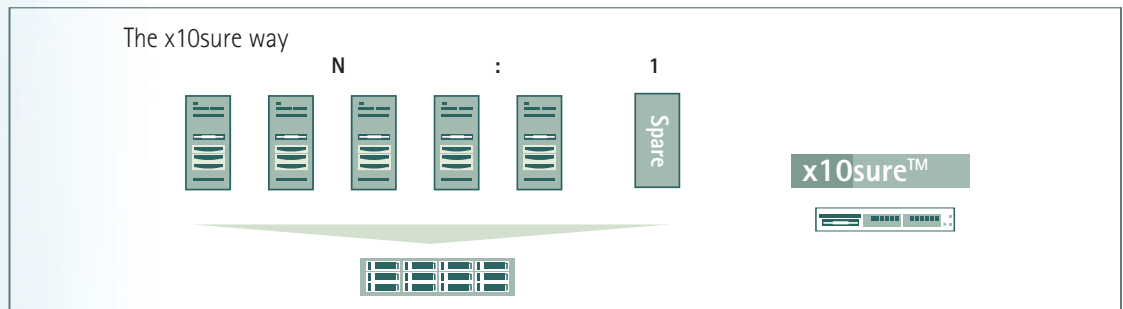

x10sure – IT Consolidation and High Availability

Like this?...

...or preferably like this?

x10sure – Maximize your Business Potential!

- ☐ Makes high availability more affordable and easier to deploy
- ☐ Moves smaller organizations toward IT consolidation and business continuity
- ☐ Easy operation, low risk
- ☐ Economic scaling options provide investment protection for the infrastructure
- ☐ IT infrastructure redundancy enables business to be more secure and productive
