

Upgrade campaign for *WebTransactions*

Issue 02. May 2005
Category openSEAS
Content *WebTransactions*
Use Extern /nur Intern
Pages 1

The release of *WebTransactions* V7.0 is coming up.
 For this reason we offer existing customers special conditions to win them for the new version.

Our offering:

With project registration till the end of 2005 we offer existing customers of *WebTransactions* the possibility to change to V7.0 paying the current upgrade price (V6.0 to V7.0).
 This offer is valid for **all previous versions including V6.0**.

Reasons to change:

- With the release of *WebTransactions* V7.0 we will stop the maintenance of previous versions including V5.0.
- New versions of the operating systems on Windows, Solaris and Linux will not be supported by former *WebTransactions* versions.
- Version V7.0 offers new possibilities of integrating host applications e.g. as WebServices.
- Mobile users get the opportunity to work offline without net connection to the host application, the synchronisation occurs at re-availability of the connection.
- Seamless integration of host applications in all portals with the new standard interface (JSR168).
- Special packages for integration in the Oracle Portal and the mySAP Enterprise Portal.
- Implementation of On-Demand-Users for cost-efficient interception of incidental peak loads.
- A new central cluster administration secures the availability of all licenses even at a computer breakdown.

Our project team will be pleased to support you with its long experience in realising the upgrade.

If you are interested or have any questions to the action please contact Elisabeth Babelotzky, +49 89 636 41307, Elisabeth.Babelotzky@fujitsu-siemens.com or Michael Hornung, +49 89 636 43486, Michael.Hornung@fujitsu-siemens.com.
